

HPCG UPDATE: ISC'16

Jack Dongarra

Michael Heroux

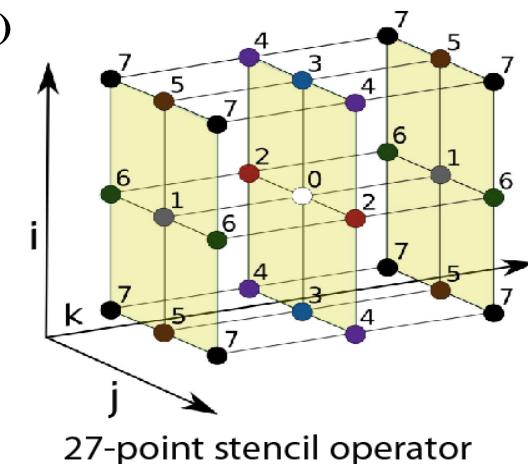

Piotr Luszczek

HPCG Snapshot

- High Performance Conjugate Gradients (HPCG).
- Solves $Ax=b$, A large, sparse, b known, x computed.
- An optimized implementation of PCG contains essential computational and communication patterns that are prevalent in a variety of methods for discretization and numerical solution of PDEs
- Patterns:
 - Dense and sparse computations.
 - Dense and sparse collectives.
 - Multi-scale execution of kernels via MG (truncated) V cycle.
 - Data-driven parallelism (unstructured sparse triangular solves).
- Strong verification (via spectral properties of PCG).

Model Problem Description

- Synthetic discretized 3D PDE (FEM, FVM, FDM).
- Zero Dirichlet BCs, Synthetic RHS s.t. solution = 1.
- Local domain: $(n_x \times n_y \times n_z)$
- Process layout: $(np_x \times np_y \times np_z)$
- Global domain: $(n_x * np_x) \times (n_y * np_y) \times (n_z * np_z)$
- Sparse matrix:
 - 27 nonzeros/row interior.
 - 8 – 18 on boundary.
 - Symmetric positive definite.

Merits of HPCG

- Includes major communication/computational patterns.
 - Represents a minimal collection of the major patterns.
- Rewards investment in:
 - High-performance collective ops.
 - Local memory system performance.
 - Low latency cooperative threading.
- Detects/measures variances from bitwise reproducibility.
- Executes kernels at several (tunable) granularities:
 - $nx = ny = nz = 104$ gives
 - $nlocal = 1,124,864; 140,608; 17,576; 2,197$
 - ComputeSymGS with multicoloring adds one more level:
 - 8 colors.
 - Average size of color = 275.
 - Size ratio (largest:smallest): 4096
- Provide a “natural” incentive to run a big problem.

HPL vs. HPCG: Bookends

- Some see HPL and HPCG as “bookends” of a spectrum.
 - Applications teams know where their codes lie on the spectrum.
 - Can gauge performance on a system using both HPL and HPCG numbers.

HPCG Status

HPCG 3.0 Release, Nov 11, 2015

- Available on GitHub.com
 - Using GitHub issues, pull requests, Wiki.
- Optimized 3.0 version:
 - Vendor or site developed.
 - Used for all results (AFAWK).
 - Intel, Nvidia, IBM: Available to their customers.
- All future results require HPCG 3.0 use.
- Quick Path option makes this easier.

Main HPCG 3.0 Features

See <http://www.hpcg-benchmark.org/software/index.html> for full discussion

- Problem generation is timed.
- Memory usage counting and reporting.
- Memory bandwidth measurement and reporting
- "Quick Path" option to make obtaining results on production systems easier.
- Provides 2.4 rating and 3.0 rating in output.
- Command line option (`--rt=`) to specify the run time.

Other Items

- Reference version on GitHub:
 - <https://github.com/hpcg-benchmark/hpcg>
 - Website: hpcg-benchmark.org.
 - Mail list hpcg.benchmark@gmail.com
- HPCG & Student Cluster Competitions.
 - Used in SC15/16, ASC
 - SC15: HPCG replaced HPL, ranking matched overall cluster ranking.
- HPCG-optimized kernels going into vendor libraries.
- Next event: SC'16:
 - 80 entries ISC16
 - 61 – SC15, 42 – ISC15, 25 – SC14, 15 – ISC14

Summary

- HPCG is
 - Addressing original goals.
 - Rewarding vendor investment in features we care about.
- HPCG has traction.
 - Original goal of top 50 systems is reachable, and more.
- Version 3.X is the final planned major version.
- HPL and HPCG make a nice set of bookends.
 - Anyone got a (wood) router?

9 (15)	NASA / Mountain View	Pleiades - SGI ICE X, Intel E5-2680, E5-2680V2, E5-2680V3, Infiniband FDR	185,344	4.089	0.1555	3.8% 3.1%
10 (9)	HLRS/University of Stuttgart	Hazel Hen - Cray XC40, Intel E5-2680v3, Cray Aries	185,088	5.640	0.1380	2.4% 1.9%

Bookends: Peak, HPL, and HPCG

HPCG Highlights

- 80 Systems:
 - Up from 61 at SC'15, 42 at ISC'15, 25 at SC'14 and 15 at ISC'14.
 - All of the top 10, most of the top 20.
- Notable new entries are:
 - New #3: Sunway TaihuLight, HPL #1
 - New #4: Sequoia, HPL #4.
- Expect upgraded Trinity result (with KNL) for SC'16.
- HPCG has diverse adoption:
 - Vendor/site versions complete.
 - Cluster competitions.
 - Industry analysis.
